In computer programming, cons (/ ˈ k ɒ n z / or / ˈ k ɒ n s /) is a fundamental function in most dialects of the Lisp programming language. cons constructs memory objects which hold two values or pointers to values. These objects are referred to as (cons) cells, conses, non-atomic s-expressions ("NATSes"), or (cons) pairs.In Lisp jargon, the expression "to cons x onto y" means to construct ...

Calling them "our bodies' own repair kits," Susan Solomon advocates research using lab-grown stem cells. By growing individual pluripotent stem cell lines, her team creates testbeds that could accelerate research into curing diseases -- and perhaps lead to individualized treatment, targeted not just to a particular disease but a particular person.

Susan Solomon: The promise of research with stem cells ...
Sean Parker: I first learned about the therapeutic potential of Crispr a few years ago, and back then it really only allowed us to remove a gene or prevent it from functioning. The ability to ...

Reference Cells. 05/16/2016; 2 minutes to read; Contributors. all; In this article. Reference cells are storage locations that enable you to create mutable values with reference semantics.. Syntax ref expression Remarks. You use the ref operator before a value to create a new reference cell that encapsulates the value. You can then change the underlying value because it is mutable.

The human mind’s content is based on the kinds of things that one interacts with on a daily basis. Many a time people perceive things based on either what they have seen, experienced, heard, read, learned or inferred after some experimentation. These perceptions are then categorized in the mind as ...

Introduction: What are stem cells, and why are they important? What are the unique properties of all stem cells? What are embryonic stem cells? What are adult stem cells?

Stem Cell Basics IV. | stemcells.nih.gov
Cloning a cell means to derive a population of cells from a single cell. In the case of unicellular organisms such as bacteria and yeast, this process is remarkably simple and essentially only requires the inoculation of the appropriate medium. However, in the case of cell cultures from multi-cellular organisms, cell cloning is an arduous task as these cells will not readily grow in standard ...
